## Technical Skills

---

**Programming Languages:** Java, Python, SQL, PostgreSQL

**Data Visualization & Business Intelligence:** Power BI, Tableau, Dash, Streamlit

**Web Development & Frameworks:** FastAPI, SQLAlchemy, Pydantic

**AI & Machine Learning:** Ollama, Agentic AI, Prompt Engineering

**Database Management:** SQL Databases, PostgreSQL, Snowflake

**Data Analytics & ETL:** KNIME

**Problem Solving & Analytical Skills:** Logical Problem Solving

## Experience/Projects

---

### Mckinsey & Company

Software Engineer 1

June 2023 – Present

Chennai, India

#### Project: Ticket Analyzer Platform with PySpark and LLM Integration

Designed and implemented a backend platform to automate the processing and classification of high-volume support tickets. Leveraged **PySpark** for distributed data processing and **Flask** to expose RESTful APIs for integration with downstream systems. Integrated **LLMs** to translate multilingual tickets into English and classify them into categories such as technical, billing, and customer service. Focused on optimizing token usage for cost efficiency while maintaining high accuracy in classification.

**Tech Stack:** Python, PySpark, Flask, OpenAI LLMs, Prompt Engineering, Token Optimization, RESTful APIs

#### Project: Survey Insights Dashboard

Developed an interactive **Survey Insights Dashboard** that allows users to upload input files, updating the dashboard in real time. Secured with **McKinseyID** integration via **Vizro**, the platform enables dynamic data exploration and visualization with an admin panel and real-time updates.

**Tech Stack:** Python, Dash, Vizro (integrated with McKinseyID), McKinseyID, SQLAlchemy, Snowflake, FastAPI, pytest

#### Project: Marketplace Web Application

Built a self-service **marketplace web application** that collects data from a user survey platform and supports four different products. The platform is multilingual, ensuring global accessibility while allowing users to interact independently.

**Tech Stack:** Python, Pydantic, SQLAlchemy, Alembic, pytest

### Mckinsey & Company

Engineer Intern

Sept 2022 – June 2023

Chennai, India

#### Project: ETL for Ticket Analyzer and EPR Survey Products

As an intern, built an **ETL process in KNIME** to transform data from the **Ticket Analyzer** and **EPR Survey** products. The data was transformed and then saved into a database for further analysis and processing. This process streamlined data management and improved the efficiency of subsequent data queries and analyses.

**Tech Stack:** KNIME, SQL, Data Manipulation

#### Project: Automate ETL Workflows

Developed a system to **automate ETL workflows** across different products, triggering jobs dynamically to process and save data to the database. This solution ensured that ETL jobs ran automatically and efficiently, streamlining the data processing pipeline for real-time updates.

**Tech Stack:** Swagger API, Python

**Project: Local AI Agent for Document Link Search POC**

Developed a local AI-powered system to search for document links based on user-input keywords. The system uses Ollama, LangChain, and ChromaDB for vector search to retrieve and display relevant document links in real time. A Streamlit-based UI was created for easy interaction, ensuring efficient search functionality and fast retrieval of documents.

**Tech Stack:** Streamlit, Ollama, LangChain, ChromaDB, Python

**Education**

---

**Vellore Institute of Technology**  
*Mtech in Software Engineering*

**Jul 2018 – Sep 2023**  
*vellore, tamilnadu*
